

ExpandIT Internet Shop

EIS was designed by Software Engineers with 15+ years of Navision experience. Our superior technology ensures customers get accurate pricing and item information, even if NAV is down. Any time connectivity is lost, whenever it is restored, all orders will automatically be sent to Navision. No lost or missing orders ever, nor a need to manually re-input any information.

EXPANDIT solutions

ExpandIT Internet Shop

Simple, Secure E-Commerce – at a price that will make your clients smile. From Partners you trust.

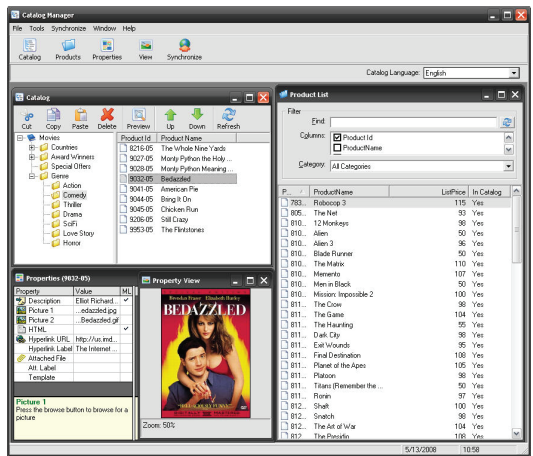

ExpandIT Internet Shop (EIS)TM gives your customer the edge in on-line selling. They have the ability to be open 24/7, 365 – even when Navision is down. It’s scalable – making it perfect for both B2B and B2C sales. It’s secure – EIS operates independently of Navision.

The Beauty of Simplicity

EIS is simple to install and implement. It can be up and running in as little as two days. Users of the system can be trained and completely functional in two days or less because of the simplicity of our screens. Your marketing team does not need to learn Navision to manage the web site since they manage the web from the Internet Shop Server, NOT Navision.

EIS supports Navision's volume discounts, invoice discounts, item discounts. On-line customers can look at their open invoices, payments, credit memos, closed invoices and any other ledger entries you desire.

EIS is easy to update and modify. As a Partner or customer, you can easily make changes to meet your needs or add additional fields with just a few clicks – thereby increasing your customer satisfaction. The **EIS** allows you to do all of the development and review in advance before ever pushing out to the web. This allows you to see exactly what it will look like before ever publishing it the web.

In **EIS**, you can control which items you want to make available for sale on the Internet. The Catalog Manager interface is designed for non-technical staff and is based on Windows functionality. It allows you to add descriptive information and/or additional images to make the items more attractive to the customers. However, only the relevant sub-set of business information is sent and made accessible to the customers on the web.

EIS gives you the option of allowing new web customers to be turned into Navision customers with the click of a button. Web transactions can be approved or rejected before becoming Navision Orders/Invoices/PO's or automatically generated in Navision through the setup options.

BENEFITS

- **Simplified installation** – **EIS** can be implemented in 2 days.
- **Low training costs** – with the simple screens, you don't need to be a NAV expert to use the system.
- **Enterprise version interfaces with Matrics docs and gives realtime interface.**
- **No user license required** for content or web managers.
- Using the Configuration Tool, **any data in Navision can be shared with your customers online** with the click of a few buttons.

The Beauty of Simplicity

EIS allows you to have as many sales people as you want and as many check-out tills as you need without any additional Navision sessions. Salespeople can place orders for their customers and allows them to impersonate their customers to solve any problems the customer might have online.

GENERAL FEATURES

- **List of favorite products/related products.**
- **Supports Navision variants such as size, color & style products.**
- **Style sheets and templates easily incorporated.**
